

IMPORTANT PRODUCT NOTICE

Thank you for choosing the ANSWER mini cranks for your race bike. There are a couple of important notes to remember when installing and maintaining the cranks to insure they perform as they should.

1. Rider weight limit is **100 lbs** for the ANSWER mini cranks for all crank lengths.
2. Make sure the 4 spider bolts are tightened down with equal pressure whether you are using the spider or mounting the ANSWER mini gear to the drive side crank arm. Remember to routinely check to insure these 4 bolts are tightened during your regular bike maintenance and cleaning.
3. Spindle bolts should be tightened down and snug against the crank arms. There should be no wiggle or play in the crank arms if the spindle bolts are tightened correctly. Failure to keep the spindle bolts tightened can result in the crank coming off the spindle and damaging the crank arm or worse, the rider. Remember to routinely check the spindle bolts to insure they are tight during your regular bike maintenance and before each track session.
4. Note that failure to keep the spider bolts and the spindle bolts tightened can result in damage to the crank arm. Damage caused by improper installation or maintenance is **NOT** covered under warranty. ANSWER BMX offers a 1 year product warranty for all of our products against manufacturer defect.
